Abstract:

Kuwait is a small oil rich country in the middle east with a small population that struggled through one of the biggest wars of the region, namingly the gulf war.

And throughout these hardships, the neurosurgical center has emerged on top of the rest of the region with it`s innovative steps and persavearance.

This paper aims to highlight the chronological succession and development of the neurosurgical services in Kuwait; it also addresses the developmental history of the adjacent services such as the neuro- interventional radiology and the radiosurgery departments which played a massive role in improving the quality of patients` health care. Finally, it gives a glimpse of future projects in these fields.

Biography:

Dr. Hamad Al Khader is a Kuwaiti neurosurgical resident from Kuwait`s board of neurological surgeries. Passionate about the historical aspects and future designs of further medical innovation.
